Workflow Application Mode

Application mode refers to a flow where the application controls workflow actions. This is typical to applications that has no API for Workflow to access.

APP	W	F	NTF	CLIENT
Creates a transaction Triggers the start of		Workflow send notific Notifications messages of the following from message templates. templates from WF, fills and send to notification. E sequence type will renotification.	are taken App takes in values ach user in	Notifications sent via e-mail, telegram, etc
				Client sends action to the App
